## Lisp Packages

Lisp packages define namespaces.

They are used to avoid naming clashes and control access permissions.

Lisp Packages

```
CL-USER> (defun lambda () \#L)
Lock on package COMMON-LISP violated when proclaiming LAMBDA as ...
CL-USER> (defpackage :i-want-my-own-lambda)
CL-USER> (in-package :i-want-my-own-lambda)
#<COMMON-LISP: PACKAGE "I-WANT-MY-OWN-LAMBDA">
I-WANT-MY-OWN-LAMBDA> (common-lisp:defun lambda () \#L)
L'AMBDA
I-WANT-MY-OWN-LAMBDA> (common-lisp:in-package :cl-user)
#<PACKAGE "COMMON-LISP-USER">
CL-USER> (describe *)
#<PACKAGE "COMMON-LISP-USER">
Documentation:
  public: the default package for user code and data
Nicknames: CL-USER
Use-list: COMMON-LISP, SB-ALIEN, SB-DEBUG, SB-EXT, SB-GRAY, SB-PROFILE
Lisp Packages and ASDF Systems
                                   Robot Operating System
                                                                Organizational
```

## Lisp Packages [2] Defining a Package

### **defpackage** *defined-package-name* [[option]] => *package*

```
option::= (:nicknames nickname)
    (:documentation string)
    (:use package-name)
    (:shadow symbol-name)
    (:shadowing-import-from package-name symbol-name)
    (:import-from package-name symbol-name)
    (:export symbol-name)
    (:intern symbol-name)
    (:size integer)
```

Lisp Packages and ASDF Systems

Robot Operating System

Organizational

# Lisp Packages [3]

### Example Package Definition

```
CL-USER> (defpackage :homework
            (:nicknames :hw)
            (:documentation "A namespace for my homework assignments")
           (:use :common-lisp))
#<PACKAGE "HOMEWORK">
CL-USER> (in-package :homework)
#<PACKAGE "HOMEWORK">
HW> (defun say-hello () (print "hello"))
HW> (say-hello)
"hello"
HW> (in-package :common-lisp-user)
#<PACKAGE "COMMON-LISP-USER">
CL-USER> (sav-hello)
The function COMMON-LISP-USER::SAY-HELLO is undefined.
CL-USER> (hw:say-hello)
The symbol "SAY-HELLO" is not external in the HOMEWORK package.
CL-USER> (hw::say-hello)
"hello"
Lisp Packages and ASDF Systems
                                   Robot Operating System
                                                                Organizational
```

## Symbol Namespaces

#### symbol-package

```
CL-USER> (in-package "HOMEWORK")
#<PACKAGE "HOMEWORK">
HW> (describe 'say-hello)
HOMEWORK : : SAY-HELLO
HW> (describe 'defun)
COMMON-LISP: DEFUN
HW> (describe :hello)
: HELLO
HW> (symbol-package 'say-hello)
#<PACKAGE "HOMEWORK">
HW> (symbol-package :hello)
#<PACKAGE "KEYWORD">
HW> (egl ':hello :hello)
Т
HW> keyword:hello
: HELLO
HW> (eql :hello keyword:hello)
Т
Lisp Packages and ASDF Systems
```

Robot Operating System

Organizational

# Symbol Namespaces [2]

#### Uninterned symbols, find-package, intern

```
HW> '#:hello
#:HELLO
HW> (symbol-package '#:hello)
NTT.
HW> (eql '#:hello '#:hello)
NTT.
HW> (gensym)
#:G1008
HW> (find-package :homework)
#<PACKAGE "HOMEWORK">
HW> (intern "HELLO" (find-package :homework))
HELLO
NTT.
HW> (describe 'hello)
HOMEWORK: : HELLO
HW> (loop for i from 1 to 5
           collect (intern (format nil "NAME-~a" i)))
(NAME-1 NAME-2 NAME-3 NAME-4 NAME-5)
Lisp Packages and ASDF Systems
                                     Robot Operating System
                                                                   Organizational
```

### Organizational Info

Lisp Packages and ASDF Systems

Robot Operating System

Organizational

#### ASDF is Another System Definition Facility:

- It takes care of compiling and "linking" files together in correct order.
- It is also responsible for finding Lisp files across the file system.

### ASDF System Definition

```
(in-package :cl-user)
(asdf:defsystem my-system
   :name "My Super-Duper System"
   :description "My Super-Duper System is for doing cool stuff."
   :long-description "Here's how it does cool stuff: ..."
   :version "0.1"
   :author "First Last <email@bla.bla>"
   :licence "BSD"
   :depends-on (alexandria and-another-system)
   :components ((:file "package")))
```

Lisp Packages and ASDF Systems

Robot Operating System

Organizational

Arthur Niedzwiecki December 02<sup>rd</sup>, 2021 Robot Programming with Lisp 9

# ASDF Systems [2]

ASDF keeps a *registry* of all the paths where it expects to find .asd files. A registry is a list of paths.

There are different types of registries: for users, for administrators, etc. But the simplest is to work with the \*central-registry\*.

### Managing the Registry

```
CL-USER> asdf:*central-registry*
(#P"/some/path/"
#P"/some/other/path/")
CL-USER> (push "~/path/to/dir/of/my-system/" asdf:*central-registry*)
("~/path/to/dir/of/my-system/"
#P"/some/path/"
#P"/some/other/path/")
CL-USER> (asdf:load-system :my-system)
T
```

#### The trailing slash is important ("/some/path/")! Lisp Packages and ASDF Systems Robot Operating System

# Robot Operating System [2]

ROS core components:

- Meta-Operating System for programming robotics software (configuring, starting / stopping, logging etc. software components)
- Middleware for communication of the components of a robotic system (distributed inter-process / inter-machine communication)
- A collection of packaging / build system tools with a strong focus on integration and documentation
- Language-independent architecture (C++, Python, Lisp, Java, JavaScript, ...)

ROS core software developed and maintained by OSRF and some externals.

Lisp Packages and ASDF Systems

Robot Operating System

Organizational

# Robot Operating System [3]

In addition, developed by the ROS community:

- hardware drivers
- libraries (PCL, OpenCV, TF, ...)
- capabilities (navigation, manipulation, control, ...)
- applications (fetching beer, making popcorn, ...)

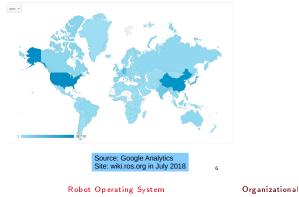

#### Lisp Packages and ASDF Systems

## roscore

- ROS master
  - A centralized XML-RPC server
  - Negotiates communication connections
  - Registers and looks up names of participant components
- Parameter Server
  - Stores persistent configuration parameters and other arbitrary data
- rosout
  - Distributed stdout

### Lisp Packages and ASDF Systems

### • Nodes are processes that produce and consume data

• **Parameters** are persistent data stored on parameter server, e.g. configuration and initialization settings

Node communication means:

- Topics: asynchronous many-to-many "streams-like"
  - Strongly-typed (ROS .msg spec)
  - Can have one or more *publishers*
  - Can have one or more *subscribers*
- Services: synchronous blocking one-to-many "function-call-like"
  - Strongly-typed (ROS .srv spec)
  - Can have only one server
  - Can have one or more *clients*
- Actions: asynchronous non-blocking one-to-many "function-call-like"
  - Built on top of topics but can be canceled

## Starting the core:

\$ roscore

Starting a node:

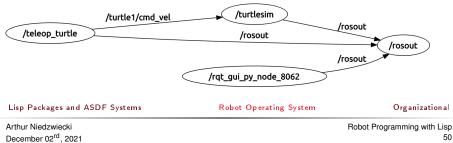

\$ rosrun turtlesim turtlesim\_node

• Starting another node:

\$ rosrun turtlesim turtle\_teleop\_key

• Examining the ROS Graph:

\$ rqt\_graph

• rosnode: gives the user information about a node

\$ rosnode -h

cleanup, info, kill, list, machine, ping

• rostopic: gives publishers, subscribes to the topic, datarate, the actual data

bw, echo, find, hz, info, list, pub, type

• rosservice: enables a user to call a ROS Service from the command line

call, find, list, type, uri

rosmsg: gives information about message types

list, md5, package, packages, show

rossrv: same as above for service types

list, md5, package, packages, show

• roswtf: diagnoses problems with a ROS network Lisp Packages and ASDF Systems Robot Operating System

# Packages and Metapackages

- *Packages* are a named collection of software that is built and treated as an atomic dependency in the ROS build system.
- *Metapackages* are dummy "virtual" packages that reference one or more related packages which are loosely grouped together

Similar to Debian packages.

Actually released through the Debian packaging system.

Lisp Packages and ASDF Systems

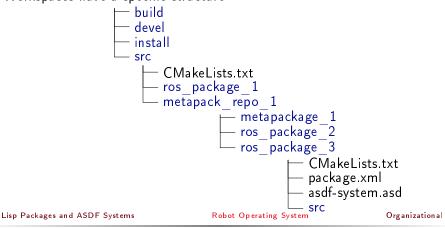

Organizational

Packages are stored in ROS workspaces:

\$ roscd

Workspaces have a specific structure

# Managing Packages

## • Creating a package:

\$ roscd && cd src/lisp\_course\_material \$ catkin\_create\_pkg assignment\_6 roslisp turtlesim geometry\_msgs

## • Compiling a package:

\$ roscd && catkin\_make

• Moving through ROS workspaces:

\$ roscd assignment\_6

Naming convention: underscores (no CamelCase, no-dashes)!

All the packages in your workspace are one huge CMake project.

 $\rightarrow$  Multiple workspaces chained together.

Lisp Packages and ASDF Systems

Robot Operating System

Organizational

## assignment 6/package.xml

```
<?xml version="1.0"?>
<package>
  <name>assignment 6</name>
 <version>0.0.0</version>
  <description>The assignment 6 package</description>
  <maintainer email="aniedz@cs.uni-bremen.de">Arthur</maintainer>
  <license>Public domain</license>
  <br/>
<buildtool depend>catkin</buildtool depend>
  <build_depend>geometry_msgs</build_depend>
  <build_depend>roslisp</build_depend>
  <build depend>turtlesim</build depend>
  <run_depend>geometry_msgs</run_depend>
  <run depend>roslisp</run depend>
  <run depend>turtlesim</run depend>
</package>
```

Lisp Packages and ASDF Systems

Robot Operating System

Organizational

## assignment\_6/CMakeLists.txt

```
cmake_minimum_required(VERSION 3.0.2)
project(assignment_6)
find_package(catkin REQUIRED COMPONENTS
  roslisp
  geometry_msgs
)
catkin_package(
    CATKIN_DEPENDS roslisp geometry_msgs
)
```

Robot Operating System

Organizational

## Launch Files Automated Starting, Stopping and Configuring the Nodes

XML files for launching nodes:

- automatically set parameters and start nodes with a single file
- hierarchically compose collections of launch files
- automatically re-spawn nodes if they crash
- change node names, namespaces, topics, and other resource names
- without recompiling
- easily distribute nodes across multiple machines

Lisp Packages and ASDF Systems

Robot Operating System

Organizational

## Launch Files [2] Automated Starting, Stopping and Configuring the Nodes

## Example

```
<lpre><launch>
  <!-- Starting nodes-->
   <node pkg="turtlesim" type="turtlesim_node" name="sim"/>
   <node pkg="turtlesim" type="turtle_teleop_key" name="teleop"
        output="screen"/>
   <!-- Setting parameters -->
   <param name="some_value" type="double" value="2.0"/>
</launch>
```

## Using the launch file:

\$ roslaunch package\_name launch\_file\_name
